

## TriTek Solutions – News Update

### TriTek Releases Trans@ction eXpress 4.5.1

---

#### TriTek has announced the latest version of its Trans@ction eXpress framework

**BOSTON, MA** – TriTek Solutions has announced the latest version of its award-winning business process management framework, Trans@ction eXpress. TriTek's Trans@ction eXpress is a transaction processing application framework, built on top of the IBM FileNet platform, which provides a highly configurable user-friendly interface, a robust background framework, and custom processing capabilities. Version 4.5.1 offers updates to search functions, bulk processing, workload manager and the user interface.

New value-added features of the latest version of Trans@ction eXpress include:

- **IS Search:** IBM FileNet Image Services repositories may be searched directly from the main workspace, through a separate tab.
- **Content and IS Search Tree Pane:** Search pages with results pulled from Content Manager and Image Services include a tree pane for grouping and sorting documents for quick and easy retrieval.
- **Bulk Processing:** Users can apply Complete, Reassign and Save functions to multiple work items simultaneously. Administrators define the parameters, such as the maximum number of work items, for the bulk functions.
- **Workload Manager Updates:** Messages are displayed in each queue window indicating the time queue counts were last updated.
- **Securable Fields:** Field-based security may be applied such that, depending on the field's value, only users belonging to certain roles can view the work item.
- **Auditing:** Logging information is written to a database whenever specific actions are taken, with detailed timing and action information recorded.
- **Warnings and Errors:** Errors and warnings may be defined at the button level rather than the action level.
- **Viewer Title Bar:** Title bars in the viewer windows display property values.
- **Multi-Value String Fields:** Support for multi-value string fields is now active for forms.
